ABSTRACT OF THE DISCLOSURE

The distributor - applicator mobile in the axial direction includes a body forming a cavity provided with an opening, and an applicator comprising a typically threaded cap forming a member for gripping the applicator, a rod and an application element:

a) the body comprises a member for forming an axial partition in the cavity so as to form an axial sequence of N staged compartments in the cavity denoted C_1 to C_N , where N typically varies from 2 to 4,

b) the forming member comprises $N-1$ separation elements being denoted S_i between two successive compartments,

c) each compartment C_i , where $i > 1$, comprises a volume forming a storage element for the product, and a free volume forming a communication, such that the application element can access each compartment in order to collect the corresponding products.
